

verifiable, secure and reachable
identity for latinamerica.

Proprietary & confidential

Last year only, companies spent more than USD 10b. in KYC processes. Additionally to that, industries like the e-commerce, spent more than 10% of their annual revenue preventing fraud.

And all of a sudden, customers and regulators want to “own their data” without knowing its implications.

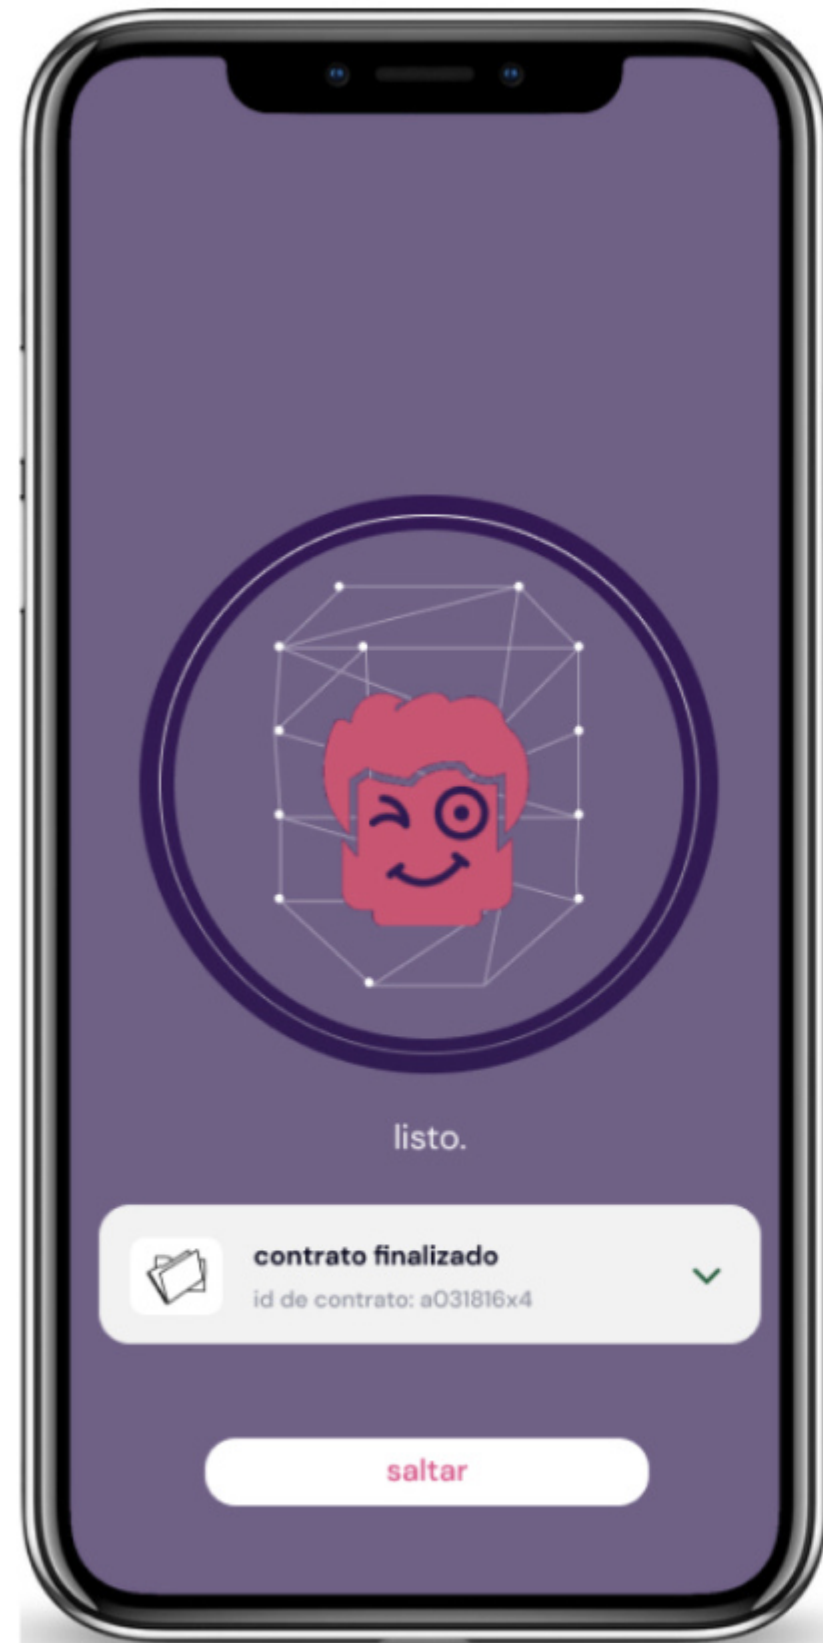

THE SOLUTION

**so we are building
the first wallet that
isnt after your
money.**

a place were people can keep all their
documents and contracts in a
secure, easy and verifiable way.

A **wallet** for **users** to **manage** their **identity**.

And have the **accountability** that **its ownership** gives.

**a place where people
and merchants can
interact.
without any friction.**

For them to decide what identity is

The **contracts**
you **sign**

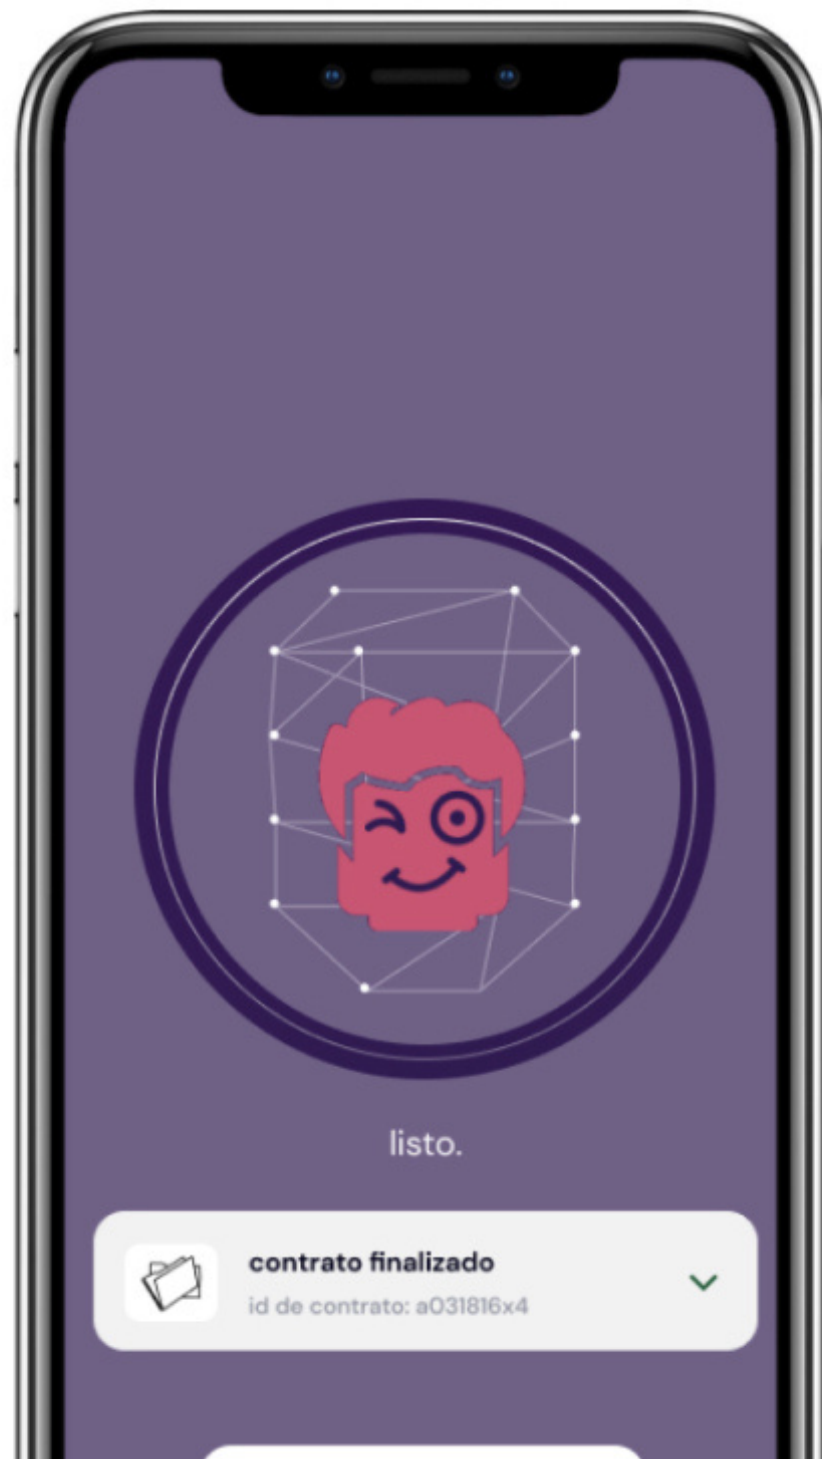

The **companies**
you **register**

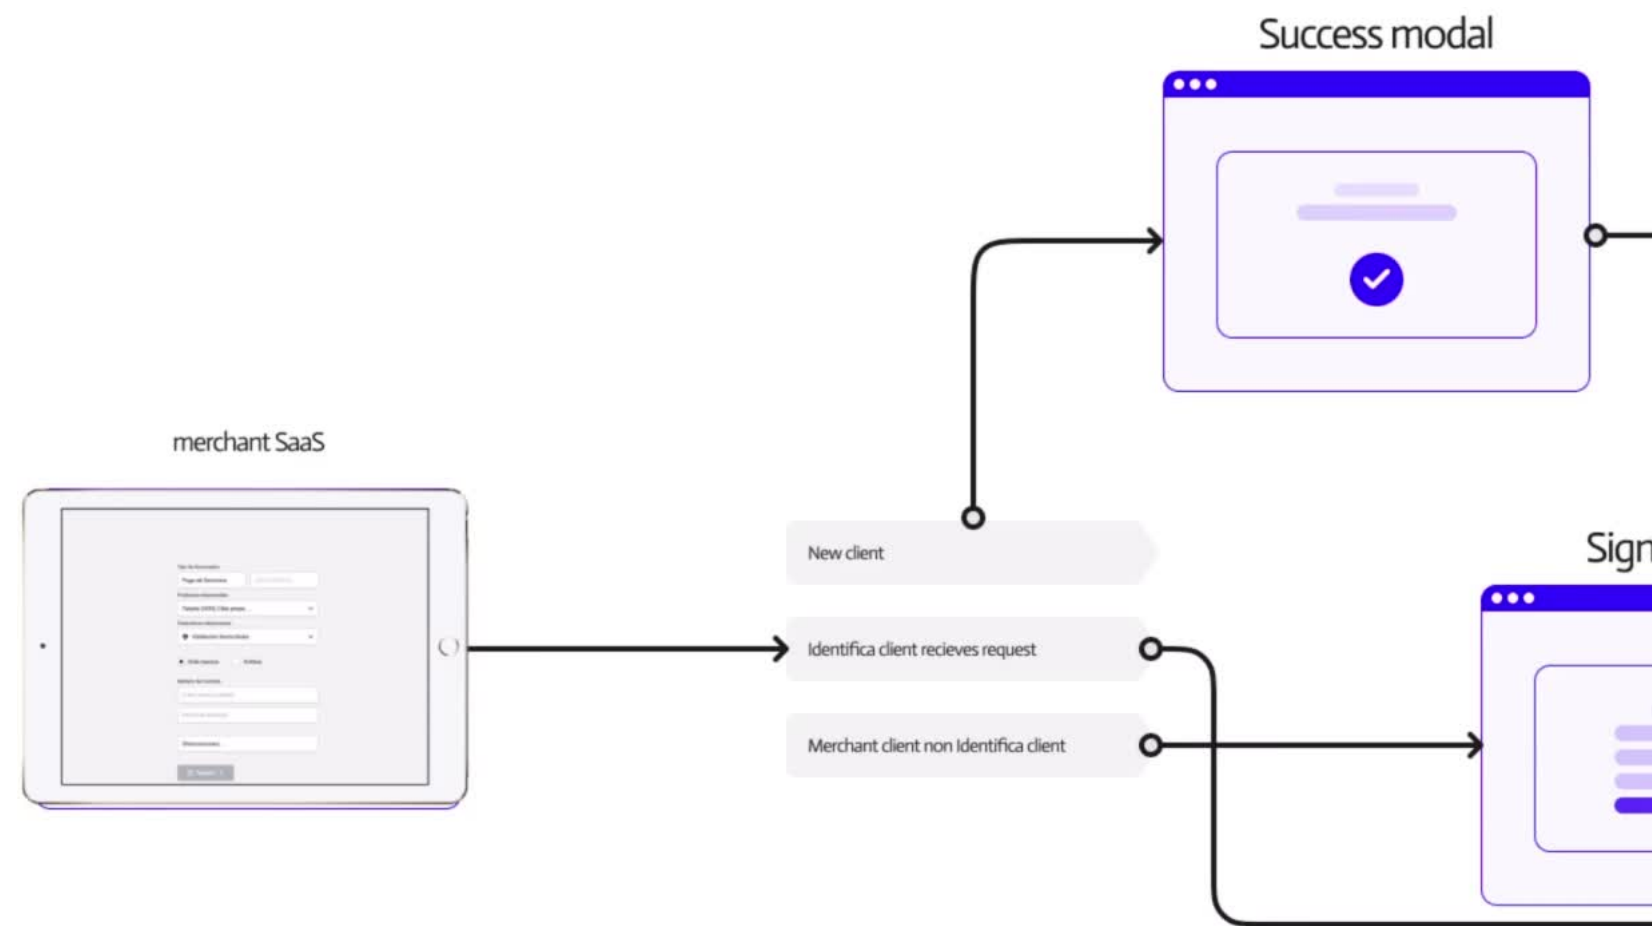

The **pets** you
raise

giving companies and users the transparency through frictionless data sharing experiences.

through a
**frictionless ux and
locally verified data.**

giving identity ownership with
accountability and
transparency.

verifiable, secure and reachable
identity for latinamerica.

Proprietary & confidential
